

Enhanced security features Now available on Liberty

TCA by E*TRADE offers a two-factor authentication system, which is a security process that requires the user to provide two means of identification before accessing accounts. It is strongly recommended that users enable this feature because it offers an extra layer of security. It requires a password, User ID, and a unique special code generated by an authentication app, installed on the user's smartphone or desktop. (Two of the most commonly used authentication apps are Google Authenticator and Duo Mobile.) Using two-factor authentication makes it harder for potential intruders to gain access to a client's personal data or identity.

Although this feature is now available to you as the RIA for Liberty access, TCA by E*TRADE is making this enhanced security feature available for representatives and account owners in the coming weeks/months. Stay tuned for further updates.

Please keep in mind that while we continually strive to provide the best available security technology, no guarantee can be made that new methods may not emerge to circumvent this technology.

You can review the [Liberty Office and Client Management User Guide](#) to learn more about the feature.

Please contact your Relationship Manager with any questions you may have or for a demonstration of the feature.
